- The ~~Vojciech Kasprzak~~ factory, on Kasprzak street in Warsaw, originally was known as produce Aga and Mazur radio sets. In 1953 it switched over to production of all radar equipment for the Polish air force, navy, and ground stations. The radar production is based on British blueprints, which were worked over and altered to some extent by a staff of Polish engineers. No assistance whatever is believed to come from the Russians in this production; the Poles manage everything.
- This secret production accounts for the relative scarcity of Aga and Mazur radio sets on the market, from a factory employing several thousand workers. The radar production process is such that the workers are not likely to know what they are producing, and the secret of the radar production at the factory appears to be unknown in Warsaw and elsewhere.
- The area of the factory is dominated by one huge glass building, in which the construction bureaus are apparently located. The other factory buildings are less conspicuous.
